Projects

Credit Scoring Model

Data Science · Python

github.com/Danioliver050/modelo_scoreCredito

2026

- Developed a credit risk model on a real dataset of 307,000 loan applications (Home Credit/Kaggle), selecting 40 of 122 variables via Information Value (WOE/IV) and handling class imbalance (8% default rate).
- Compared Logistic Regression and XGBoost (AUC 0.74–0.75, KS 0.37–0.38) and built a points-based scorecard (PDO methodology) with SHAP-based interpretability and drift monitoring (PSI).

Medallion Data Lake — Data Warehouse

Data Engineering · Python · SQL

github.com/Danioliver050/dataWarehouse

2026

- Built a Python data pipeline following the Medallion architecture (Bronze, Silver, and Gold), transforming a denormalized dataset of 50,000 credit proposals into an analytical data mart.
- Modeled the Gold layer using a star schema in DuckDB, with a proposal fact table and customer, product, channel, and time dimensions, including data quality validations and 9 automated Pytest tests.

Streaming Architecture — Amazon Connect

Data Engineering · AWS

github.com/Danioliver050/diagrama_arquitetura

2026

- Designed a real-time data architecture for a banking contact center using AWS (Connect, Kinesis, Lambda, S3, Athena), documenting technical justifications and a monthly cost estimate of \$24/month.
- Modeled the complete ingestion-to-dashboard flow with under 60-second latency from event to operational KPI delivery.

Experience

Banco Carrefour

Risk and Credit Analyst — Intern

São Paulo, SP, Brazil

Jun 2023 – Oct 2024

- Prepared monthly regulatory reports (DRL, DLI, DDR, and DRM) using SQL, SAS, and Excel, ensuring compliance with Brazilian Central Bank requirements within established deadlines.
- Extracted and processed data from relational databases via SQL to support statistical analyses of credit, liquidity, and reputational risk, reducing report preparation time.
- Developed and maintained reporting dashboards in MicroStrategy, centralizing risk indicators for business and management teams.
- Collaborated with cross-functional teams to align regulatory information, serving as the primary point of contact between the risk department and internal client areas.

Skills

- **Data:** SQL, Python, Pandas, Power BI, Excel, AWS, MicroStrategy, SAS
- **Development:** Java, Spring Boot, REST API, Git
- **Methodologies:** Scrum, Kanban
- **Languages:** Portuguese (Native), English (C2), Spanish (B1)

Education

FIAP

B.S. in Software Engineering

São Paulo, SP, Brazil

Feb 2026 – Dec 2029

UNICID

A.S. in Systems Analysis and Development

São Paulo, SP, Brazil

Feb 2023 – Dec 2025
